For Ford Cars

---

---

Manufactured by

**The Buffalo Gage Co.**

Factory  
1536 Jefferson St.

Buffalo, N. Y.

Office  
90 Florida St.

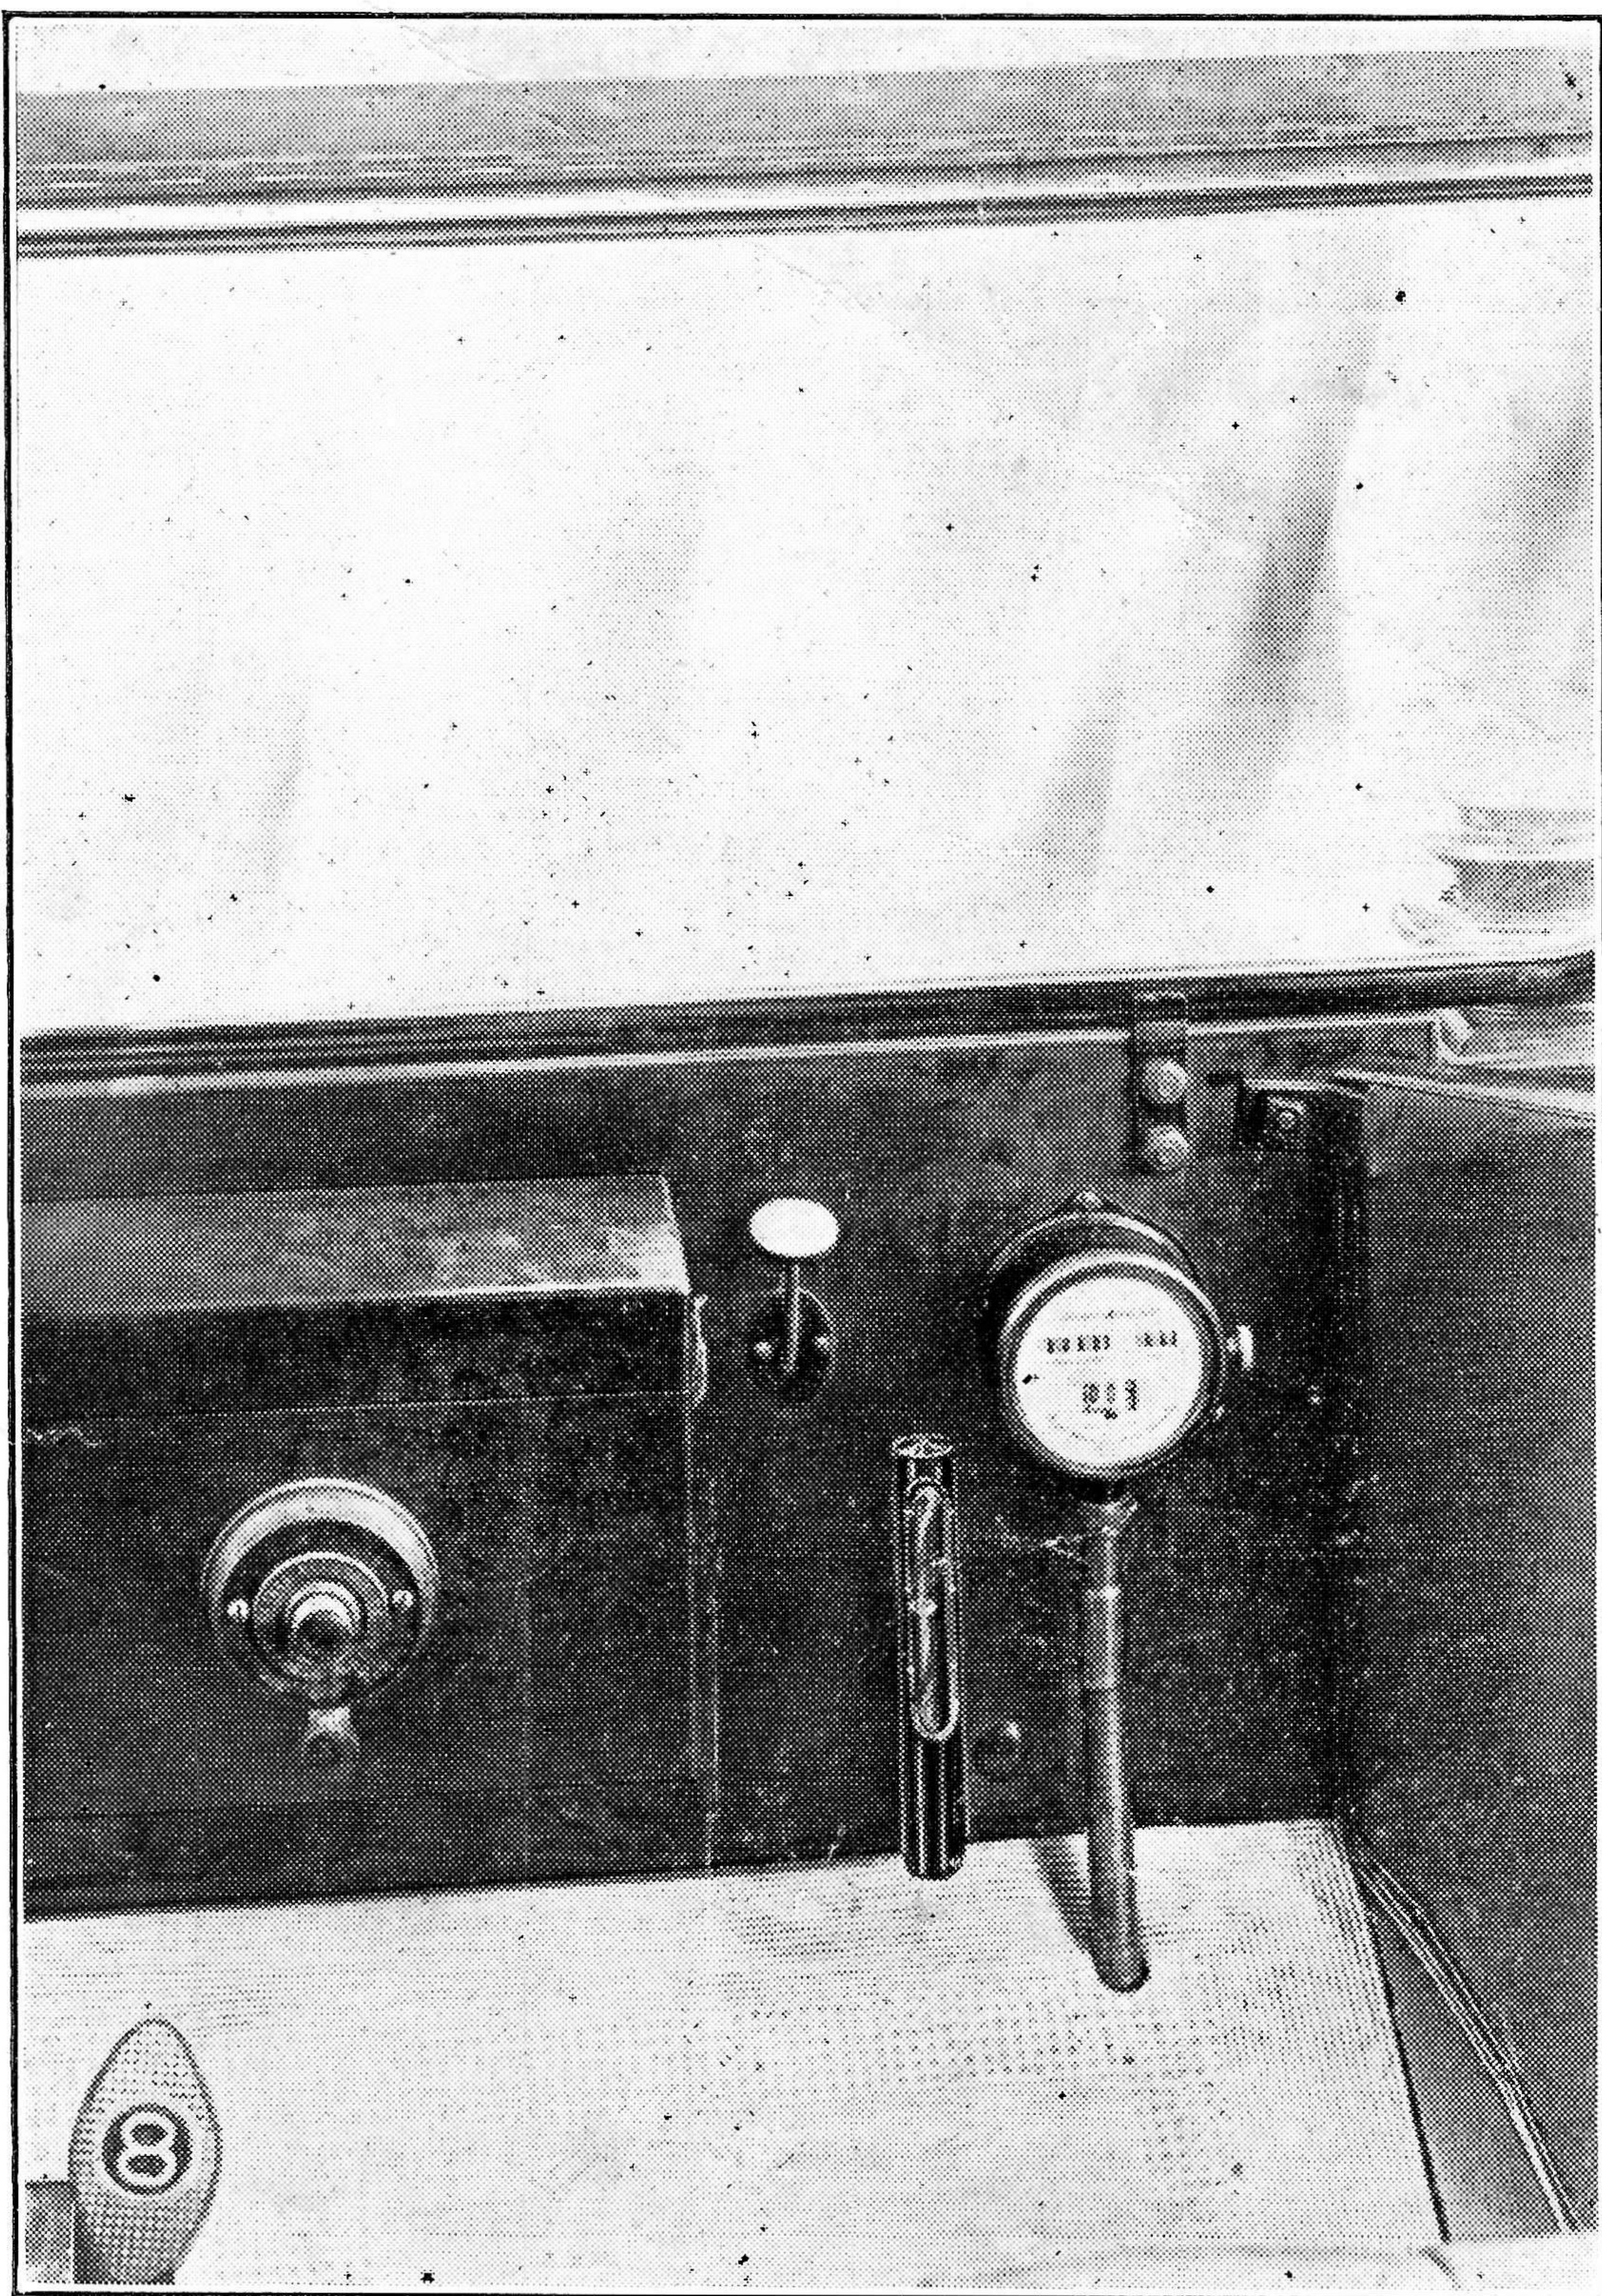

# The Buffalo Oil Gage

shows up on the dash, in plain view of the operator, at all times whether traveling or standing, just how much oil there is in the transmission case of a Ford car. The advantages of this are apparent at once to every Ford owner, as it eliminates once and forever the necessity of crawling under the car to open pet cocks, only to find out if oil level is between the two cocks, but no telling if it is near upper cock—i. e., enough for about 200 miles—or barely above lower, which would mean enough for only about 10 miles running.

The Buffalo Oil Gage saves oil and repair bills, as the tendency among Ford owners is, for safety's sake, to carry the oil level much higher than it should be; this is not only wasteful of oil, but what is a good deal worse, causes excessive carbon deposits to accumulate, resulting in loss of power and preignition, especially when climbing hills, overheating and uneven running, as well as fouled and oil soaked spark plugs. All this can easily be prevented by installing a Buffalo Oil Gage, as the oil level can safely, and with absolute certainty, be maintained just where it ought to be. Not to say anything about the worry that is taken off the operator's mind by doing away with all uncertainty regarding the amount of oil in the engine.

The Buffalo Oil Gage is very simple in construction, and absolutely reliable in action; it is light, but strong, and very neat in appearance; it can easily be attached by anyone with the ordinary tools by following our plain and complete directions, and the price is unusually low for a well made article of merit. In fact, made possible only by producing them in enormous quantities, and eliminating heavy advertising expenses.

## THE BUFFALO OIL GAGE

### In Position on a FORD T

The top or indicating part of the Buffalo Oil Gage is on the dash, therefore out of reach of the dust and dirt of the road, and, as there are no glass parts under the car, all danger of breakage by flying stones and consequent ruining of engine are positively done away with.
